

The app **gtPixLoader** is a companion app for the iPad-app **gtPixFrame**

With this app pictures from the photoroll of the iPhone or pictures taken by the builtin camera can be sent via mail or uploaded to the Dropbox Appfolder „gtPixFrame“.

The pictures are scaled to a standard size (1024x768 oder 546x728) before being sent.

Functions

When started, all pictures from the Photos app are shown in a selection view. By tapping a picture this picture can be selected for upload / send. Another tap deselects the picture. Multiple pictures may be selected for a on step sending or uploading.

The Check icon in the toolbar obscures all nonselected pictures to get a better overview of the selection.

By tapping the Dropbox symbol or the Mail symbol the selected pictures are uploaded to the Dropbox or a Mail view in which the pictures can be sent.

A double tap to a picture shows this in a bigger version.

Settings

Here can be selected, if the sending of selected pictures can be done via Mail and / or Dropbox (the according icons are shown in the toolbar).

A button allows the Loon tot he Dropbox account, this must be done only once.

It is possible to define multiple mail addresses, all defined addresses are filled in the mail view. The subject is filled automatic to the here defined value (standard is "gtPixFrame").

For further information (especially about Dropbox accesss) read the user manual in the iPad app **gtPixFrame**.
